Risk register

For MO Bank (fake bank)

Operational environment:
The bank is located in a central European country with stable socioeconomic conditions and low violent crime rates. Many people and systems handle the bank's data-approximately 25,000 on-premise employees across thousands of physical branches and 5,000 remote or hybrid employees managing central IT systems. The customer base of the bank includes 11,000,000 individual accounts and 500,000 commercial and corporate accounts. The bank's services are marketed by professional sports leagues and thousands of local businesses and retail partner networks in the community. There are strict financial regulations that require the bank to secure their data and funds, like having enough cash and liquid assets available each day to meet the Polish Financial Supervision Authority (KNF) and European Central Bank requirements.

Asset	Risk(s)	Description	Likelihood	Severity	Priority
Funds	Business email compromise	*An employee is tricked into sharing confidential information.*	3	2	6
	Compromised user database	*Customer data is poorly encrypted.*	1	3	3
	Financial records leak	*A database server of backed up data is publicly accessible.*	2	3	6
	Theft	*The bank's safe is left unlocked.*	1	3	3
	Supply chain disruption	*Delivery delays due to natural disasters.*	1	3	3
Notes	*This bank is a key target for attacks due to the vast volume of financial data it manages—belonging to millions of Poles—and its strategic importance to the country's economy. Its operations, conducted through a distributed structure combining on-site and remote work, increase its vulnerability to sophisticated phishing and ransomware attacks. Additionally, the brand's high visibility in the worlds of sports and business attracts cybercriminal groups motivated by political or financial interests.*				

Asset: The asset at risk of being harmed, damaged, or stolen.
Risk(s): A potential risk to the organization's information systems and data.
Description: A vulnerability that might lead to a security incident.
Likelihood: Score from 1-3 of the chances of a vulnerability being exploited. A 1 means there's a low likelihood, a 2 means there's a moderate likelihood, and a 3 means there's a high likelihood.
Severity: Score from 1-3 of the potential damage the threat would cause to the business. A 1 means a low severity impact, a 2 is a moderate severity impact, and a 3 is a high severity impact.
Priority: How quickly a risk should be addressed to avoid the potential incident. Use the following formula to calculate the overall score: **Likelihood x Impact Severity = Risk**

Sample risk matrix

Severity

Likelihood	Low 1	Moderate 2	Catastrophic 3
Certain 3	3	6	9
Likely 2	2	4	6
Rare 1	1	2	3
